Delhi man duped of Rs 50 lakhs

Home > India News > 5 Points On How Delhi Man Lost Nearly 50 Lakh After Receiving Blank, Missed Calls

5 Points On How Delhi Man Lost Nearly 50 Lakh After Receiving Blank, Missed Calls

Cyber fraudsters stole nearly ₹ 50 lakh from a man running a security agency in Delhi by making several blank and missed calls on his mobile phone.

India News | Edited by Bhavva Sukheia | Undated: December 13, 2022 8:51 am IST

Here's how the unique case of forgery unfolded:

- 1 The man, identified as Shamsher Singh, received repeated blank and missed calls on his cell phone between 7pm and 8:44pm on November 13. While he ignored some of the calls, when he picked up the ring no one spoke from the other side.
- 2 However, after some time, Mr Singh started receiving several messages from his bank for the withdrawal of money. And in just a short time, he got the shock of his life as nearly half a crore had been withdrawn from his account through real-time gross settlement (RTGS), i.e., instant fund transfer.
- 3 Speaking to NDTV, Mr Singh said that the fraudsters were able to complete the transactions without ever needing the OTP (One Time Password) code, which is typically used as a security measure to verify the identity of the account holder.
- 4 Delhi Police has registered a case on Mr Singh's complaint. IFSO (Intelligence Fusion and Strategic Operations) unit or Cyber Crime Unit, is probing the matter. Initial investigations suggest that the fraud's planners might be based in Jharkhand's Jamtara region.
- 5 Officials believe the thieves may have performed a 'SIM swap.' They might have called in to start the RTGS transfer and activate the OTP. They might have heard the OTP mentioned in an adjacent call's IVR (Interactive Voice Response).

More Cases

Many B'lureans lose cash to sim card swap fraud

Bank Insiders Part Of Ploy: Investigators

Petlee.Peter@timesgroup.com

Bengaluru: If you are using a cellphone number with a 3G sim card and your online banking account is linked to it, you could be the next victim of a thriving 'sim card swap fraud'. At least 30 Bengalureans have reportedly fallen prey to scammers, losing huge sums of money since mid-2016.

BEWARE THE TRAP

For insurance executive Aroop Ghosh (38) from Domlur, the ordeal began when he attended a phone call at his lunch table in mid-February. "The male caller claimed he was calling from a mobile service provider and confirmed with me if I was still using a 3G sim. He told me that there is an offer for easy swapping to 4G for better internet speed and sent me a 20-digit number by SMS after disconnecting the call," he said.

Alert: Beware of fraudulent calls asking you to do SIM Swap by sending an SMS 'SIM <20 digit number> to 121' without having a physical SIM. This may lead to fraud/misuse of your mobile number.

WORD OF CAUTION: An sms alert circulated among subscribers, alerting them to be wary of the sim swap fraud

HOW THEY TRICK

- Fraudster impersonates the victim and obtains new 4G sim card from outlet or online
- Poses as executive of mobile service provider, calls the victim offering instant 3G to 4G sim switch
- Sends 20-digit number (printed on new 4G sim), urges the victim to send it to the service provider's helpline to initiate the switch

While victim's 3G sim gets deactivated, the fraudster's cellphone with 4G sim gets activated with the victim's number

- Fraudster initiates online purchases and money transfers from victim's bank account or card after receiving OTPs on new sim

An ignorant Ghosh took the bait by texting the 20-digit number to the mobile service provider's helpline and selected option 1 to confirm the 4G swap as advised by the con man. "Within a few seconds my sim card got deactivated and it remained so," rued Ghosh. The following day, electronics good worth over Rs 2 lakh were purchased online using his HDFC bank account.

According to an investi-

gating officer with the CID's cybercrime unit, the modus operandi is thus: The culprits obtain a new 4G sim for the victim's cellphone number by either impersonating him at an outlet of the service provider or online, using the 4G sim swap page on the service provider's website. The new sim is then delivered to the given address within a day.

"The culprits then call the victim claiming to be execu-

tives from the service provider and send the 20-digit number printed on the new 4G sim card via SMS and convince him or her to activate it. Once the 3G sim on the victim's cellphone becomes inactive, the 4G one on the fraudsters' cellphone becomes active. The fraudsters then use it to receive OTPs," the officer added.

Investigators suspect the scammers must be obtaining victims' confidential bank account or card details, including cellphone details, from bank insiders. "They try every number pertaining to the accounts and some 3G sim card users fall for it," the officer added.

Over 30 victims of the sim swap fraud have approached cybercrime police stations of state CID and Bengaluru city police (BCP) since mid-2016.

Some like Manish Raj, a city-based BPO employee, who are tech aware have also fallen prey to the fraud. "I didn't receive a call but only an internet-generated SMS with the 20-digit number from the fraudster, which I carelessly activated and lost Rs 30,000 from my ICICI account," recalled Raj.

(Names of victims have been changed on request).

Keeping Passwords Safe and Secure

Avoid using the same password for different accounts

Change passwords on a regular basis

Keep passwords at least 12 characters long (and ideally longer)

Passwords must involve a mix of upper- and lower-case letters plus symbols and numbers

Avoid the obvious - such as using sequential numbers("1234") or personal information that someone who knows me might guess, such as my date of birth or pet's name.

Change the default passwords on my IoT devices, WiFi router etc.

Avoid writing my passwords down or sharing them with others

Use a password manager to help generate, store, and manage all my passwords in one secure online account

Keeping Passwords Safe and Secure

Password hygiene

Consider
passphrases

Require unique
passwords

Employ password
managers

3 Factors of Authentication

Knowledge Factor (something you know)	Possession Factor (something you have)	Inherence Factor (something you are)
<p data-bbox="233 401 465 429">****</p> <p data-bbox="249 484 450 506">Password</p> <p data-bbox="258 558 440 645"></p> <p data-bbox="170 683 529 705">Security Question</p> <p data-bbox="210 762 490 805"><u>1</u> <u>2</u> <u>3</u> <u>4</u></p> <p data-bbox="311 858 388 880">PIN</p>	<p data-bbox="884 361 1016 470"></p> <p data-bbox="826 484 1074 506">Smartphone</p> <p data-bbox="790 552 1110 653"></p> <p data-bbox="834 683 1068 705">Smart Card</p> <p data-bbox="807 751 1095 816"></p> <p data-bbox="772 858 1107 880">Hardware Token</p>	<p data-bbox="1489 369 1663 465"></p> <p data-bbox="1466 484 1690 506">Fingerprint</p> <p data-bbox="1431 547 1721 658"></p> <p data-bbox="1431 683 1721 705">Retina Pattern</p> <p data-bbox="1462 729 1690 838"></p> <p data-bbox="1398 858 1754 880">Face Recognition</p>

Using Multi-Factor Authentication

- Protect all essential accounts – such as email, social media, or banking apps – with multi-factor authentication (MFA)

Multifactor Authentication

Device Security

- **Mobile**
- **Computer/Desktop**
- **Wi-Fi Router**
- **CCTV and IoT**

Mobile Security

- **Buy Smartphone having licensed OS**
- **Keep your Phone operating system up to date**
- **Back up your phone's data regularly**
- **Set up a pass code longer than the 4-number**
- **Enable two-factor authentication**
- **Take advantage of built-in security features**
- **Make sure your WiFi network is secure**
- **Use different Passwords for Phone, UPI, Bank Accounts etc.**
- **Activate the "Find my Phone" feature**

Mobile Security

- Set the phone to “self destruct” i.e., wipe itself after 10 failed password attempts
- Regularly change iCloud, Google Drive and iTunes passwords
- Use only trusted charging stations
- Disable voice assistant on the lock screen
- Revoke app permissions to use the camera, microphone, etc.
- Encrypt your data and wipe your phone before selling
- Buy apps only from Google Play Store or App Store
- Disable the Unknown Sources to avoid installation of 3rd party applications.
- Don't Jailbreak or Root your phone

Wifi Attacks

- Evil Twin Attack
- Jamming Signals
- Misconfiguration Attack
- Honey Spot Attack
- Unauthorised/Adhoc Connection Attack

Precautions

- Avoid public WiFi networks
- Use VPN connection if you have to use public WiFi network.
- Always change the default credentials of your router.

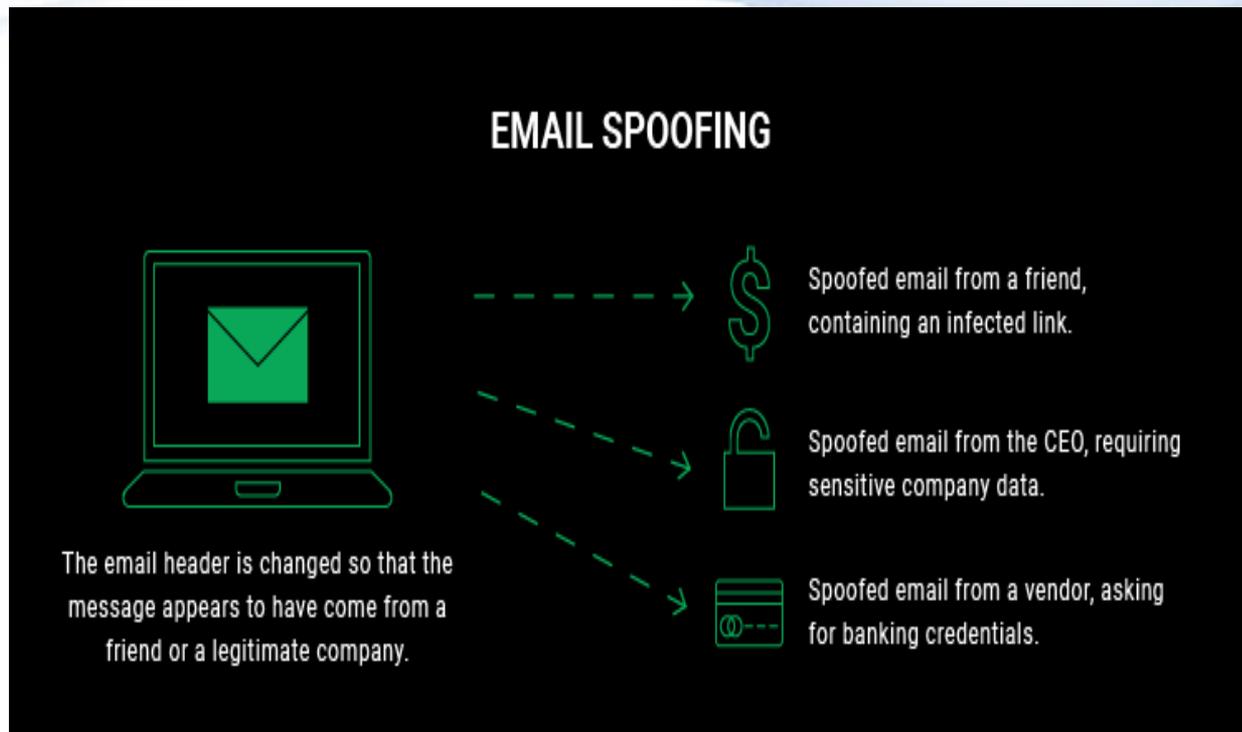

Bluetooth Security

- Always keep Bluetooth in off state when not in use.
- Hackers can exploit open bluetooth for-
 - Bluesnarfing
 - Eavesdropping
 - Denial of Service
 - Viruses and Worms
 - Bluetooth headset vulnerabilities
- Avoid pairing Bluetooth devices in crowded spaces.

Email Spoofing

- Fraud
- Phishing
- Malware
- Account Takeover
- Email Interception

Email Spoofing -via Display Name

You are so hired Inbox x

Net Banking Safety Tips

1. Access your bank website only by typing the URL in the address bar of your browser	10. Scan your computer regularly with Antivirus to ensure that the system is Virus/Trojan free.
2. Do not click on any links in any e-mail message to access the site.	11. Change your Internet Banking password at periodical intervals.
3. Do not be lured if you receive an e-mail/SMS/phone call promising reward for providing your personal information or for updating your account details in the bank site.	12. Always check the last log-in date and time in the post login page.
4. Be aware of downloading any malicious application from mobile application stores that are offering Online Banking.	13. Avoid accessing Internet banking accounts from cyber cafes or shared PCs, or via public WiFi
5. Having the following will improve your internet security: <ul style="list-style-type: none">• Newer version of Operating System with latest security patches.• Latest version of Browsers• Firewall is enabled.• Antivirus signatures applied	14. After you have logged in, you will not be asked to provide your username and login password again
6. Keep checking your savings account regularly	15. Do not use public computers to login
7. Always use licensed anti-virus software	16. Do not share your details with anyone
8. Ensure to sign up for banking alerts	17. Set the transaction limits in the bank account
9. Enable 2FA/MFA	18. Keep tabs on beneficiary accounts

Keeping Passwords Safe and Secure

Avoid using the same password for different accounts

Change passwords on a regular basis

Keep passwords at least 12 characters long (and ideally longer)

Passwords must involve a mix of upper- and lower-case letters plus symbols and numbers

Avoid the obvious - such as using sequential numbers("1234") or personal information that someone who knows me might guess, such as my date of birth or pet's name.

Change the default passwords on my IoT devices, WiFi router etc.

Avoid writing my passwords down or sharing them with others

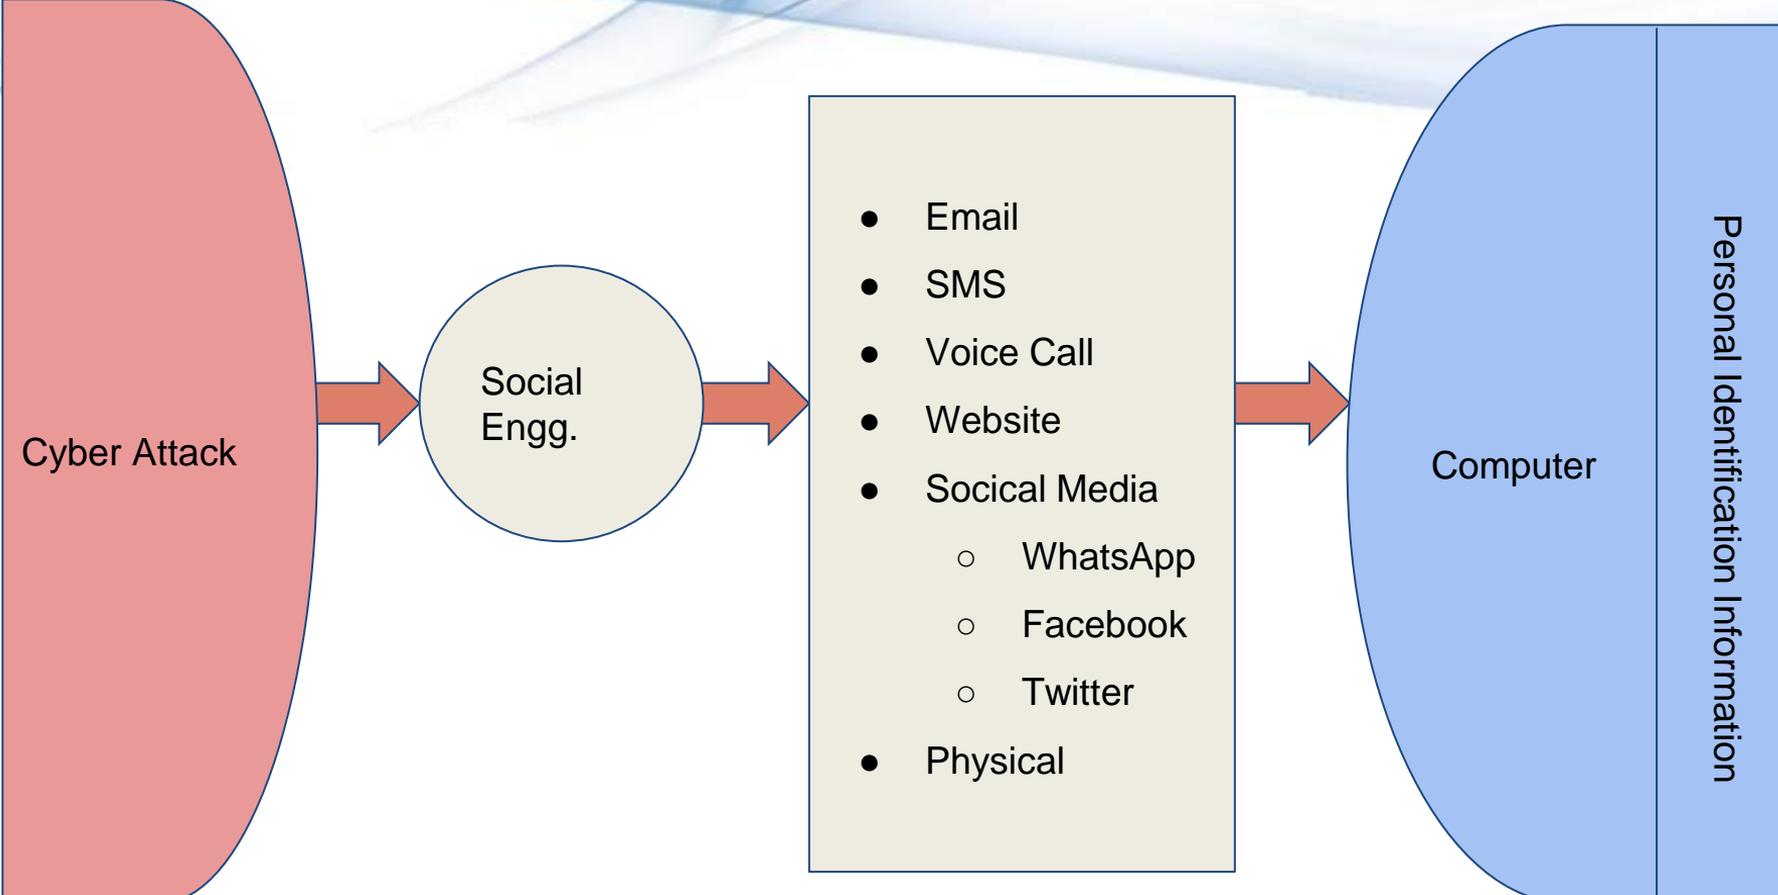

Use a password manager to help generate, store, and manage all my passwords in one secure online account

Secure Device

Cyber Attack Vectors

Baiting

Dear user, congratulations!

We want to thank you for being a loyal **Google India** user! Your IP address [REDACTED] has been randomly selected to receive a **FREE Apple iPhone X.**

From time to time we select a handful of Google users to give them the opportunity to receive valuable gifts from our partners and sponsors. This is our way of thanking you for choosing Google as your preferred search engine.

Today is your lucky day! You are one of the 10 randomly selected users who will receive this gift.

To receive your gift, you simply have to complete our short and anonymous survey. But hurry! There are only a few gifts available today!

How satisfied are you with Google?

Very Satisfied

Pretexting

Pretexting Scenario: The Internet Service Provider

An “internet service provider” shows up on your doorstep for a routine check. Once inside, they have free reins to snoop through your devices and valuable information.

TIP

If a service provider arrives without an appointment, don't just let them inside. Verify their legitimacy by asking questions about your plan.

Pretexting Scenario: Gift Card Eligibility

You receive an email alerting you that you're eligible for a gift card, but you just need to share some personal information to redeem it.

Congratulations, Steve!

You're eligible for a \$5,000 gift card. To redeem, please **share your banking information** for wire transfer and also your **home address**.

Sincerely,
Notareal Co.

TIP

Never share sensitive information via email, phone, or text.

Phishing

Dear All,

There is a notification from NIC regarding NIC Account Suspension that users will not be allowed to use NIC email services from July 15th onwards due to implementation of KAVACH.

Kindly verify if your KAVACH application is working properly. If a user does not install KAVACH properly his/her account will not be accessible w.e.f. July 16th, And account will be disabled after one week of inactivity.

Verify/Install KAVACH : <https://email.gov.in//kavach/verification>

The screenshot displays an email interface with a phishing notification. The notification text is: "Dear All, There is a notification from NIC regarding NIC Account Suspension that users will not be allowed to use NIC email services from July 15th onwards due to implementation of KAVACH. Kindly verify if your KAVACH application is working properly. If a user does not install KAVACH properly his/her account will not be accessible w.e.f. July 16th, And account will be disabled after one week of inactivity. Verify/Install KAVACH : <https://email.gov.in//kavach/verification>". A security warning dialog box is overlaid on the email content, stating: "Informational URL https://beechtree.co.in/Admin/kavach/index.php is external to the mailing system. Hence, you are requested to go through the URL and ensure its authenticity and then click 'Yes' to proceed. Else, click 'No' to cancel." The dialog box has "Yes" and "No" buttons. The email header shows the sender as "ANSHU PANDE" and "Deepak Virmani". The email body also contains the same phishing text. The email is dated "Jul 20 6:15 PM" and "Jul 14 4:35 PM". The date "31 May 2023" is visible in the bottom left corner.

BANK ACCOUNT SUSPENSION OR
SIM EXPIRATION

Avoid sharing personal details while lodging your grievances/complaints on different social media platforms

It may be used by cyber fraudsters to defraud you posing as a customer care executive

WATERING HOLE ATTACK

- 01 Attacker compromises website.
- 02 User visits website. Malicious code is downloaded.
- 03 Malware is dropped onto system of target.
- 04 Attacker initiates malicious activities.
- 05 Malware can spread to more systems.

Diversion Theft

Diversion Theft

- **A Con**

- Persuade deliver person that **delivery is requested elsewhere** - "*Round the Corner*"
- When deliver is redirected, attacker persuades delivery driver to **unload delivery near address**
- **Ex:** Attacker parks **security van outside a bank**. **Victims going to deposit money** into a night safe are told that the **night safe is out of order**. **Victims then give money to attacker** to put in the fake security van
- **Most companies do not prepare employees for this type of attack**

Honey Trap

- A friend request is sent from some unknown person probably a female having mutual friends on Facebook, which is often accepted by the user.
- The request sender starts chatting and during conversation in many cases, people share whatsapp number with the unknown fraudster,
- subsequently, a video chat request is received and the fraudster plays a trick and gets undressed and also instigate the users as well and mostly people are trapped.
- the fraudster records the chat video with live image and starts blackmailing for money to avoid publishing obscene video on social media and to the friends of users.
- Once the money is paid, the demand goes on increasing.

Dumpster Diving

Dumpster diving

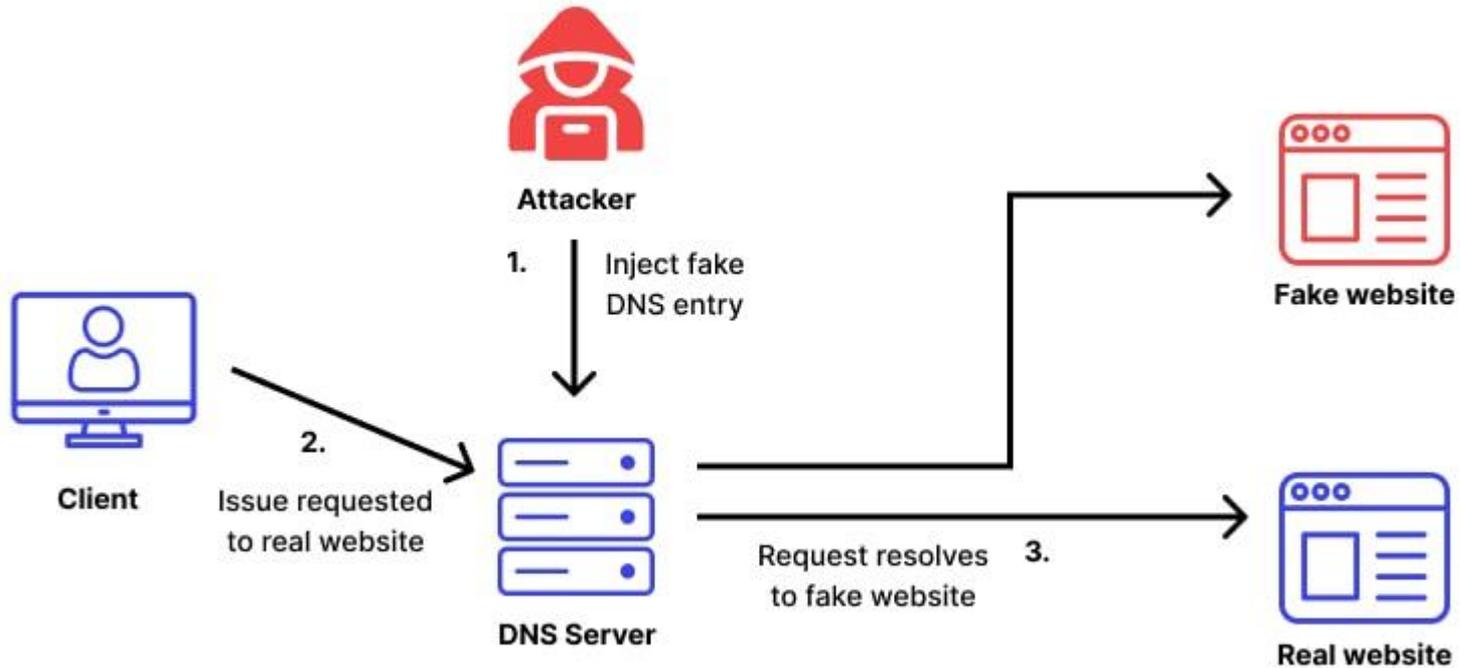

This entails combing through someone else's trash to find treasures—or in the tech world, discarded sensitive information that could be used in an illegal manner. Information that should be securely discarded includes, but is not limited to:

Sensitive Contracts of Pentagon Found In Dumping Grounds of Ghana

In the recycling process, the recklessly dumped drives or data assets go through multiple vendors. They can seamlessly access and exploit customer information. Ghana is one of the most toxic electronic-waste dumpsites in the world. Agbogboshie, a commercial district of Nigeria's capital Accra, is known for conducting recycling processes like reuse, repair, or recycling effective components. Nearly a substantial amount of e-waste is dumped here every single day. Scavengers use the sight to extract valuable metals from the trash alongside technology components like power banks, batteries, CPUs, storage mediums, casings, circuit boards, and so on. Sensitive U.S. security data were reportedly found amidst the e-waste in Ghana, as journalism students on study tour purchased hard drives in open-air market. Further examination of hard drives revealed that it contained multimillion-dollar defense contracts between the Pentagon, Department of Homeland Security and Northrop Grumman, one of the largest military contractors in the U.S. Such paramount lapses and breach of security normally goes unnoticed unless recorded, but it does bring to fore the hassles of dumpster diving and the need to prevent the same.

How to Prevent Phishing

Phineas Phish shares tips on how to avoid getting hooked

Phishing is a fraudulent attempt designed to obtain money, information, or something else of value. It's called "phishing" because the process uses these messages to "bait and hook" their targets.

Too Good To Be True

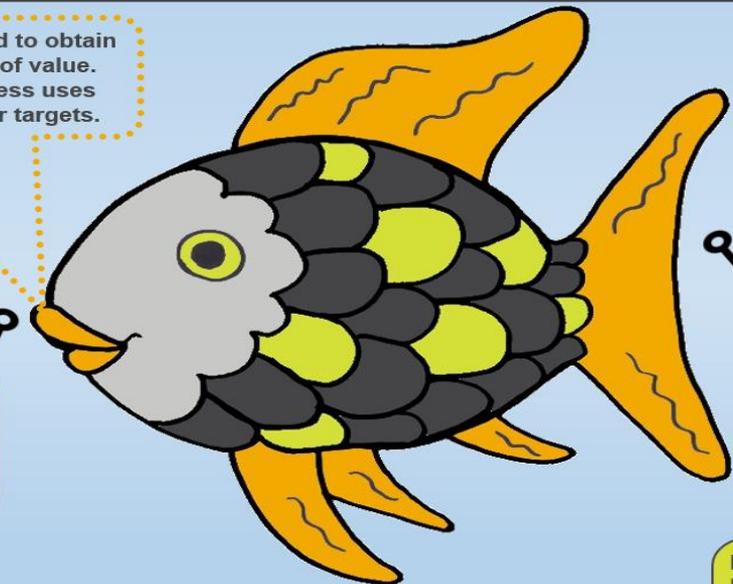

Phishers will offer you amazing deals or quick money to get you to make a careless choice. Ask yourself: **Is this too good to be true?**

Think Before You Click

Before clicking on a link, verify the destination URL by hovering over the link. If the URL doesn't look right, or match your intended website don't click!

Slow and steady

A sense of urgency or pressure is a classic phishing Trick. Take the time to stop and think about what is being asked of you.

Sharing Isn't Caring

Do not forward spam or suspicious emails to friends, family or colleagues!

When in doubt, throw it out!

Phish Fight!

Play hard to get! Don't download anything you suspect might be dangerous, and don't send a questionable contact the information they ask for.

Phishy Situation

Phishers want to get their "hooks" into you as fast as possible. If someone is too eager to be friends or offers you a great opportunity unexpectedly, it could be a "phishy" situation.

Plenty of Phish in the Sea

Different bait, same hook! Phishing attacks can come through email, phone calls and text messages. Be vigilant and follow these tips to avoid getting "lured" in.

How To Prevent Phishing

<p>1. Learn to Identify Phishing</p> <ul style="list-style-type: none">• Urgency• Money Baits• Grammer Mistakes• Impersonal Messages	<p>2. Don't Fall Into the False Sense of Security</p> <ul style="list-style-type: none">• Be Aware of Spear Phishing• Learn to Recognise Targeted Phishing Tactics
<p>3. Don't Click on That Link</p> <ul style="list-style-type: none">• Triple-Check the Authenticity of Every Mail• Do Not Click on Links Inside Email Messages	<p>4. Don't Trust Unsecure Sites</p> <ul style="list-style-type: none">• Ensure the URL of the Website Starts with https://• Ensure there is closed padlock icon next to the URL
<p>5. Don't Disclose Personal Information</p> <ul style="list-style-type: none">• Never Enter Personal Information on Suspect Sites• Do Not Share Sensitive Information on Your Social Media	<p>6. Update Regularly</p> <ul style="list-style-type: none">• Keep Your Software Up to Date• Turn On Automatics Updates• Always Update Your Browser
<p>7. Block Pop-Ups to Prevent Phishing</p> <ul style="list-style-type: none">• Use Popup-Blocking and Anti-Phishing Addons• Always Close Pop-Ups Using the X Sign in One of the Corners	<p>8. Enable 2FA With WenAuthn/U2F Security Keys</p> <ul style="list-style-type: none">• Deploy Two-Factor Authentication or Multi-Factor Authentication For All Your Users• Use WebAuthn/U2F Security Keys to Prevent Phishing
<p>9. Enable Firewalls</p> <ul style="list-style-type: none">• Enable Filtering on Your Email Server• Use Network Firewall• Use Desktop Firewall	<p>9. Raise Phishing Awareness</p> <ul style="list-style-type: none">• Conduct a Security Training For Your Employees• Be Aware of Other Kinds of Cyberattacks

Mitigation

Table 1	
Maximum Liability of a Customer under paragraph 7 (ii)	
Type of Account	Maximum liability (₹)
• BSBD Accounts	5,000
• All other SB accounts • Pre-paid Payment Instruments and Gift Cards • Current/ Cash Credit/ Overdraft Accounts of MSMEs • Current Accounts/ Cash Credit/ Overdraft Accounts of Individuals with annual average balance (during 365 days preceding the incidence of fraud)/ limit up to Rs.25 lakh • Credit cards with limit up to Rs.5 lakh	10,000
• All other Current/ Cash Credit/ Overdraft Accounts • Credit cards with limit above Rs.5 lakh	25,000

Table 2	
Summary of Customer's Liability	
Time taken to report the fraudulent transaction from the date of receiving the communication	Customer's liability (₹)
Within 3 working days	Zero liability
Within 4 to 7 working days	The transaction value or the amount mentioned in Table 1 , whichever is lower
Beyond 7 working days	As per bank's Board approved policy

Mitigation

- Immediately call at 1930 (within one hour of fraud)
- Register your complaint at <https://cybercrime.gov.in>
- Keep screen shots and bank details handy for uploading on the site
- Register your complaint with the Bank or FinTech company, whatever is applicable
